

DIESEL GENERATOR

Now you can replace the diesel and petrol generator with a Solectric mobile power station, it is completely green and non-pollutant to the environment. Solectric is clean energy and contributes to social energy conservation and emission reduction. As a standby power supply or as main power supply, it provides continuous seamless power for families and businesses during power outages. No need for buying fuel, no noise, no oil change, no spark plug replacement, no manpower needed.

The days of only depending on local and national government for electricity is coming to an end. We are now in the age of wireless electricity, meaning going off-grid time to time. The cost of electricity will never come down, with most people depending on the government to provide electricity for their citizens, the price will only go higher, and now developed countries are also challenged with meeting the demands for electricity like the developing countries. Because of the growing demands, there is load-shedding on the grid that is disrupting people's lives and economic activities. Just like the transportation industry, those who can afford cars bought cars and those who can't afford uses public transport.
